

JDN MONOCRANE

SINGLE FLANGE WHEELS

JDN MONOCRANE SW Series wheels are manufactured in Ductile Iron, Grade 500-7(GGG-50), providing a balance between strength, ductility and wear resistance. Featuring shielded ball bearings and machine cut teeth.

Our large range of single flange wheels provide for operation on most types of monorail beams and tracks.

The wheel is available with either a plain flange or integral machine cut ring gear.

Both types feature a spherical tread profile which is compatible with both parallel and tapered beam flanges.

The standard configuration consists of a stationary cantilevered axle with shielded anti-friction bearings mounted inboard in the wheel.

**GEARED WHEEL
WELD IN AXLE**
(PART No eg SW200G-W)

**GEARED WHEEL
SCREWED AXLE**
(PART No eg SW200G)

**PLAIN WHEEL
SCREWED AXLE**
(PART No eg SW200P)

**PLAIN WHEEL
WELD IN AXLE**
(PART No eg SW200P-W)
