

## Extend the Life of Your Hoist from 7 years to 10 years!

**SENTINEL** is a new hoist monitoring technology which can increase the life of a hoist from 6.7 years to 10 years and save you money!

AS2550.1-2011 Table 9.6 requires that the usage of a hoist be overestimated by up to 150% if an automatic usage recording device is not fitted to the hoist.

**SENTINEL** doesn't just satisfy the requirements of AS2550.1-2011 Clause 9.2.2(a) – it exceeds it. **SENTINEL** is a fully automatic recording device and more.

**SENTINEL** is a cost effective solution which monitors hoist duty, service intervals, hoist overloads, load snatching and a whole host of other operational faults and issues. This data is stored on board allowing your factory service technician to download the data and provide you with accurate and reliable information about the past usage and remaining life of your hoist.

What is the value of this information?

- Correct poor usage procedures before they damage your hoist, crane and building.
- Prove compliance with AS2550.1-2011
- Accurately plan for the service and replacement costs of equipment.
- Helps to provide a safe workplace.
